
FOR IMMEDIATE RELEASE:**NEXT GENERATION NITIX ANTISPAM LEVERAGES BEST OF BREED TECHNOLOGIES
TO DELIVER ROBUST SOLUTION TO SMALL BUSINESSES**

Toronto, Canada – Dec 10, 2007 — Net Integration Technologies, the leading provider of easy-to-use and affordable networking infrastructure for small businesses, today announced the release of its next generation Nitix AntiSpam solution. The solution, which leverages best-of-breed antispam technologies from Engate™ and Vircom®, will provide small businesses one of the most robust antispam solutions, coupled with SMB simplicity.

Spam is growing steadily, and becoming more malicious than ever before - impacting delivery of critical emails, worker productivity, network resources, business security and operational costs.

Nitix AntiSpam 2.0 integrates two completely different, yet complementary antispam technologies, Engate MailSentinel™ and Vircom SCA™, in an easily deployed and low-maintenance solution, rendering it one of the most robust antispam solutions in the SMB market. The unique value of Nitix AntiSpam 2.0 stems from a combination of network and content-level scanning, significantly reducing the load on servers by pre-emptively stopping unwanted email traffic at the network level and ensuring fast delivery of legitimate email. The solution helps realize cost savings in network bandwidth, reduced server load, lower IT administration costs, and increased employee productivity.

Tightly integrated with the Nitix and NitixBlue small business server operating systems, the Nitix AntiSpam engine is run by unique Nitix server autonomies, which automate the installation and configuration processes, providing the ease of use that small businesses need. Benefits include:

- **Pre-emptive Protection:** Stops spam before it reaches your network.
- **Cost Savings:** Reduces email bandwidth and server load, conserving network resources.
- **Increased Productivity:** Faster flow of legitimate email and improved employee productivity.
- **High Reliability:** Multi-layer spam protection using network and content scanning technologies.
- **Reduced Maintenance:** Spam updates are automatic, so there is no need for continual system maintenance.

A vital component of the next generation Nitix AntiSpam solution is the multiple layers of protection provided by Engate MailSentinel and Vircom SCA. "Our partnership has proven valuable in helping us provide an extremely effective antispam solution for small businesses," says Hiep Vuong, Chief Technology Officer, Net Integration. The Engate MailSentinel engine proactively stops spam at the network level using sender scrutiny and the Vircom SCA antispam engine further scans the content of email that reach past the network level.

According to John Gray, owner of Bentor Technologies, Inc, and a Net Integration Approved Partner, "By pre-emptively stopping sophisticated threats such as image spam, phishing, zombie attacks and email born viruses at the connection level, our customers have realized significant savings from network bandwidth, server storage and IT costs, as well as an overall improvement to the throughput of their messaging systems".

Nitix AntiSpam 2.0 is available immediately and sells exclusively through Net Integration's network of Value Added Resellers. For more information please visit: www.nitix.com.

About Net Integration Technologies Inc.

Net Integration provides easy-to-use and affordable networking infrastructure for small businesses. Serving the needs of those with little or no in-house IT expertise, Net Integration enables businesses to quickly get up and running, and focus on business, rather than worry about IT. With highly reliable automated data backup and disaster recovery solutions, Net Integration protects customers from inadvertent loss of critical data.

Based on robust Linux technology, Net Integration's self-managing operating system, Nitix, has over 11,000 installations worldwide, and does not require Linux-specific knowledge. Net Integration has an extensive global network of resellers and strategic partnerships with IBM, Ricoh, Sage Software, Relavis, Extracomm, Kaspersky, Vircom, and Engate.
